

ABSTRACT

A contact base 40 is pushed by the printing head 18K, when the printing head 18K is mounted onto the carriage 16. Thereby, the connection face 32 of the flexible carriage wiring 30 together with the contact base 40 follows the connection face 62 of the of the flexible head wiring by swinging movement around the touching point in the directions of arrows X, X', Y, Y', Z, and Z'. Therefore, the connection face 32 slants to follow any slanting of the connection face 62. Consequently, the two connection faces 32, 62 come close together over the entire faces to give precise electric connection of the electric connection points between the two connection faces.
